## **1.0 INTRODUCTION**

### **1.1 Purpose and Scope of Work**

This report presents the results of a Phase I Environmental Site Assessment (ESA) for the vacant property located at the southwest intersection of Stevenson Boulevard and Cherry Street in Newark, California (the subject property or site) (Plate 1). The site consists of seven parcels totaling approximately 79.8 acres. PES Environmental, Inc. (PES) was retained by Sobrato Development Companies (Sobrato) to compile and evaluate available information on existing environmental issues at the site, and to evaluate the potential for onsite and/or offsite releases of hazardous materials that may affect the subject property. PES understands that Sobrato currently owns the site and is evaluating redevelopment of the property.

The ESA was performed in general accordance with American Society for Testing and Materials (ASTM) guidelines for Phase I Environmental Site Assessments (ASTM E 1527-05). The following tasks were conducted during this ESA:

- Reviewed Federal, State and local agency databases to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Reviewed regulatory agency records regarding the site and adjacent properties;
- Reviewed historical aerial photographs and historical topographic maps of the site and surrounding area to evaluate prior land uses;
- Conducted historical research and reviewed historical information for the site;
- Reviewed an environmental database search as required by AAI;
- Interviewed individuals with knowledge of the site;
- Conducted an inspection of the site and a reconnaissance of surrounding properties to assess the potential for contamination of the site from onsite or offsite sources. The site visit was conducted by an environmental professional with qualifying experience; and
- Prepared this report presenting the results of the Phase I ESA investigation.

### **1.2 Special Terms and Conditions**

Chain-of-title documentation was not provided. The ESA activities were conducted in general accordance with ASTM E1527-05.

### **1.3 Limitations and Exceptions**

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting engineering field at the time they were performed. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Sobrato and may be relied on only by Sobrato. No other party may rely on this report without the express written permission of Sobrato and PES.

## **2.0 SITE DESCRIPTION**

### **2.1 Location**

The subject property is comprised of seven parcels of approximately 79.8 acres identified by Assessor's Parcel Numbers (APNs) 901-0185-018, -019, -020, -021, -022, -023, and -024. The subject property has no address.

The site is located in a mixed residential, agricultural, and commercial area within the City of Newark and County of Alameda, California (Plate 1). The site is bounded to the north by Cherry Street, to the east by Stevenson Boulevard, to the south by a drainage canal and to the west by an Alameda County Flood Control and Water Conservation District (ACFCWCD) drainage channel (Plate 2). Addition Road formerly bisected the property in a north-south direction.

### **2.2 Site and Vicinity Characteristics**

The site is currently a vacant lot (Plate 2). Access to the property is via a gated entrance on Cherry Street. The subject property is situated in an area that is mixed residential, undeveloped and commercial.

According to the United States Geological Survey (USGS) *Niles, California* and *Newark, California* Quadrangle 7.5-minute series topographic maps dated 1961 photorevised 1980 and 1993, respectively, the site is situated at an elevation of approximately 15 feet above mean sea level. The site is relatively flat and slopes regionally to the south. The closest water body is ACFCWCD drainage channel, located adjacent to the western site boundary.

### **2.3 Regional Geology and Hydrogeology**

Based on the results of investigations performed in the site vicinity, soils in the area consist primarily of silts and clays. Groundwater has been encountered in the site vicinity at depths ranging from approximately 5 to 7 feet below ground surface (bgs) (T&R, 2003). Based on

## Properties to the West

The subject property is bordered to the west by ACFCWCD drainage channel. Farther west, across the drainage channel, is a construction site for the future Ohlone Community College campus.

## 2.6 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, a historical topographic map, Newark Building Department (NBD) records and results of previous investigations. Sanborn Fire Insurance Maps were not available for the subject property area.

### **2.6.1 Aerial Photograph Review**

Aerial photographs were obtained from Pacific Aerial Surveys of Oakland, California. Photographs for the following dates were reviewed: June 1, 1954; July 3, 1959; December 11, 1963; May 2, 1969; May 29, 1975; June 23, 1981; October 3, 1986; July 7, 1992 and November 2, 1999. These photographs are presented in Appendix A. A photograph dated November 1, 2005 was reviewed at Globexplorer.com. The following is a summary of the aerial photograph review.

#### Subject Property

The 1954 photograph shows the west portion of the subject property cultivated with row crops. The remainder of the site is undeveloped. Addition Road runs north-south through the west portion of the site, separating the area cultivated with row crops from the rest of the site. At the southeast intersection of Cherry Street and Addition Road is a fenced area in which hay bales, equipment or small structures are present. Additional equipment or other items are visible south of this area adjacent to Addition Road. A narrow trail is present on the south central portion of the site. On the 1959 photograph, the west and southern portions of the site are cultivated. In the fenced area adjacent to the road, two structures and numerous pieces of equipment, vehicles and other items are present, covering most of the area. Items are also still present south of this area adjacent to the road. The scale of the photographs from 1963 and 1969 precludes detailed observation of site activities; however, the west and south portions of the site appear cultivated. On the 1969 photograph, some hay bales or other items are also visible in the north central portion of the site.

In the 1975 photograph, the northeast portion of the site is in use with unknown activities. (Subsequent interviews, discussed in Section 2.6.4 below, suggest that the activities observed in the 1975 photograph may have been associated with horse stables on the site.) In the 1975 photograph, several small roads are present on the site, and numerous small objects, as well as areas where the soil appears to have been stockpiled or disturbed, are visible. A possible structure is present along Cherry Street. The west portion of the site remains cultivated with

topography and the results of investigations performed in the subject property vicinity, groundwater flow to the south is anticipated, although local variations are likely based on proximity to surface water features.

## **2.4 Descriptions of Existing On-Site Structures and Improvements**

### **2.4.1 Structures and Current Use**

The subject property is currently vacant. There are no structures present on the subject property.

### **2.4.2 Other Improvements**

No services are currently supplied to the subject property, but electricity and natural gas are supplied to the subject property area by Pacific Gas and Electric (PG&E). Water and sewage services are provided by Alameda County Water District (ACWD).

## **2.5 Current Uses of Adjoining Properties**

PES conducted a reconnaissance of the surrounding area to assess whether neighboring sites represent a potential environmental condition that could affect the subject Site. The current uses of the adjoining properties as observed during PES' reconnaissance are summarized below.

### **Properties to the North**

The site is bound to the north by Cherry Street. Farther north across Cherry Street is a residential development.

### **Properties to the East**

The site is bound to the east by Stevenson Boulevard. Farther east are commercial buildings occupied by Galgon, Victron and CertainTeed (to the northeast).

### **Properties to the South**

The site is bordered to the south by a drainage canal. Across the drainage canal are six commercial buildings. The buildings are primarily vacant, but NovaSys Medical occupies a portion of one building.

what appear to be row crops. The south portion of the site appears undeveloped but not cultivated; however, the southeast corner of the site appears fenced and cultivated. On the 1981 photograph, there is no longer any evidence of the former use observed in 1975, although three to four structures remain in this area. No significant changes are apparent on the remainder of the site. The 1986 photograph shows seven to eight structures in this area, some of which appear to be barn-type structures. A few items are also visible stored outside the buildings. The west portion of the site remains in agricultural use.

Photographs from 1992, 1999 and 2005 show no structures present on the site. Although Addition Road is visible, it no longer connects to Cherry Street. The site appears cultivated. Hay bales are visible in the north central portion of the site in the 1999 photograph. On the 1999 photograph, vehicles and other equipment are present in the southeast corner of the site. The activity may be associated with construction of the drainage channel at the south of the subject property and landscaping along the east site boundary.

### Subject Property Vicinity

Photographs from 1954 through 1975 show the subject property vicinity as primarily undeveloped agricultural land. Some commercial buildings and greenhouses are present southwest of the subject property, and several residences and associated farm structures are present to the southeast. A small commercial building is present immediately south of the site on the 1975 photograph, and a larger commercial building is present immediately north of the site across Cherry Street. On the 1981 photograph, commercial buildings are present northeast of the site at the northeast corner of Stevenson Boulevard and Cherry Street. On the 1986 photograph, a residential development is present immediately north of the site across Cherry Street, which has been widened and extended to the west. A commercial development is present immediately southeast of the site. On the 1992 photograph, the area north of the site has been fully developed with residences. The commercial building previously visible immediately south of the subject property is no longer present. On the 1999 photograph, additional commercial buildings are present immediately east of the site across Stevenson Boulevard, and immediately south of the site. The 2005 photograph shows additional commercial buildings immediately southwest of the site.

### **2.6.2 Topographic Maps**

PES reviewed the USGS *Niles, California* Quadrangle 7.5-minute series topographic maps produced in 1953, 1961 and 1961 photorevised in 1968, 1973 and 1980 and *Newark, California* Quadrangle 7.5-minute series topographic maps produced in 1959 and 1959 photorevised 1968, 1973 and 1980, and 1993. All maps show a building at the southeast intersection of Cherry Street and Addition Road. The 1961 photorevised 1973 map shows an unimproved road entering the site from Stevenson Boulevard and extending to the central portion of the site. Six buildings are shown along the road. On the 1961 photorevised 1980 map, the road and buildings are gone, and an additional building is shown along Cherry Street.

The subject property vicinity is shown as primarily undeveloped on all maps, with some sparsely situated small buildings. Beginning on the 1961 photorevised 1968 map, commercial buildings are present further east of the site.

### **2.6.3 Newark Building Department Records**

Newark Building Department (NBD) did not have any files for the subject property. NBD maintains records by address only. The subject property does not currently have an address, and no records were found for the subject property in the potential address range for the site.

### **2.6.4 Interviews**

PES interviewed Mr. Tim Cook, a former resident and current farmer at 7210 Stevenson Boulevard, who has lived in the area since the early 1950s and has knowledge of the subject property. Mr. Cook reported that in the 1950s and 1960s, the subject property was occupied by Heath Dairy. After the dairy, Mr. Cook reported that several horse stables were present at the subject property. During the period in which horse stables were present at the site, Mr. Cook remembered seeing several piles of soil with concrete pieces which he thought may have been construction debris.

## **3.0 RESULTS OF PREVIOUS INVESTIGATIONS**

In 1997, CET Environmental Services, Inc. (CET) performed a Phase I and limited Phase II ESA for two parcels, a portion of which included the subject property for this ESA. The remainder of the site is located adjacent to the south of the subject property.

CET's research indicated that the subject property had been used for agricultural purposes. The subject property was vacant at the time of CET's site inspection; hay had recently been harvested from the site.

CET collected soil samples (from approximately 5 feet bgs) and groundwater samples from three borings on the two parcels, one of which appears to have been located on the subject property. Samples were analyzed for the presence of total petroleum hydrocarbons as gasoline (TPHg) and diesel (TPHd); benzene, toluene, ethylbenzene and xylenes (BTEX); methyl tert butyl ether (MTBE), volatile organic compounds (VOCs); organochlorine pesticides and organophosphorus pesticides. No analytes were detected in any of the soil or groundwater samples. However, an unidentified petroleum hydrocarbon closely resembling motor oil was identified in soil from two borings at 5 milligrams per kilogram (mg/kg) (specific borings are not identified) and in groundwater from all three samples at up to 270 micrograms per liter ( $\mu\text{g/L}$ ). Based on current and historical site uses, CET concluded that the contaminant was derived from an upgradient source.

Based upon a review of environmental databases, CET did not identify an offsite sources of environmental contamination.

No further investigation was recommended by CET.

## **4.0 RECORDS REVIEW**

### **4.1 Environmental Liens**

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens or State deed restrictions associated with the subject property.

### **4.2 Standard Environmental Record Sources**

The discussion presented in this section is based on available information provided by government agencies and various databases. An EDR report dated March 31, 2006 contains listings of sites located within a 1-mile radius, which were selected in accordance with ASTM E-1527-05 standards. This information is obtained from computerized databases of Federal, State and local records. Descriptions of the lists reviewed are presented below. The EDR database report is included as Appendix C.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. EPA – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS) – within ½ mile of the subject property;
- U.S. EPA – CERCLA NPL – within 1 mile of the subject property;
- U.S. EPA – Resource Conservation and Recovery Information System (RCRIS), Treatment, Storage, or Disposal (TSD) facilities (within ½ mile of the subject property) and Small Quantity and Large Quantity Generators of hazardous waste (SQG and LQG) databases within ½ mile of the subject property;
- U.S. EPA – Emergency Response Notification System (ERNS) – within ¼ mile of the subject property;
- U.S. EPA RCRA Corrective Action Report (CORRACTS) – within 1 mile of the Site;
- U.S. EPA Facility Index System (FINDS) – within ¼ mile of the subject property;
- U.S. EPA Toxic Chemical Release Inventory System (TRIS) – within ¼ mile of the subject property;

metals antimony, lead and nickel were detected in at least one sampling location. No further action was required by regulatory agencies concerning groundwater at the Ohlone College site.

Soil samples collected during the cone penetrometer were analyzed for the presence of TPHd/mo, PCBs, pesticides and metals. No PCBs or petroleum hydrocarbons were detected in soil at the site, and no metals were detected in soil above background levels. Several pesticides were detected in shallow soil throughout the site. The pesticides DDT, DDD and endrin ketone were all detected below the U.S. EPA preliminary remedial goals (PRGs) for residential sites. The pesticides, toxaphene and DDE, were detected in soil at concentrations up to 2.5 and 6.2 mg/kg, respectively which are above the respective PRGs of 0.44 and 1.7 mg/kg.

Soil remedial goals for toxaphene and DDE were determined by DTSC to be 0.44 and 0.5 mg/kg respectively at the Ohlone College site. The cleanup selected for the site consisted of relocating soil containing toxaphene and DDE above the remedial goals to the southern 50-acre portion of the site which will continue to be used for agricultural purposes (T&R, 2005b). A deed restriction will be placed on the southern 50-acre parcel to limit residential and other sensitive uses.

Two sites listed on the EDR report included in Appendix C, Agilent Technologies and Peterbilt Motors, are shown on the EDR map as located adjacent to the subject property. In fact, these sites are located approximately ½ mile west and cross-gradient of the subject property, and are not considered an environmental concern to the subject property.

The remaining sites listed in the surrounding area in the databases are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed site has received case closure by the appropriate regulatory agency; (2) the listed site is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed site is a soils-only affected case; and (4) the listed site is located at too great a distance to represent a significant environmental condition with respect to the subject property.

## **5.0 SITE INSPECTION**

An inspection of the subject property was conducted on May 3, 2006. The inspection was conducted by Julie Turnross, R.E.A. and Ann Loomis, P.E. All areas of the site were inspected. Site photographs are presented on Plates 3 through 5.

The 79.8 acre site consists of recently-disced soil, except for a portion of soil and native growth in the southern portion of the site. A narrow strip of landscaped area is present along Cherry Street and Stevenson Boulevard.

The paved remnant of the former Addition Road is present running north-south through the central portion of the site. A piece of farm equipment was observed adjacent to the end of the road on the southern portion of the site. A small section of rusted pipe was observed near the east site boundary.

One empty and one partially full approximately 1-gallon containers of the herbicide Goal 2XL were found adjacent to the central portion of the former Addition Road. Goal 2XL contains oxyfluorfen, naphthalene and isophorone.

### **5.1 Chemical Use and Storage**

Other than the herbicide containers discussed above, no chemical use or storage was observed at the site.

### **5.2 Underground and Aboveground Storage Tanks**

No evidence of current or former USTs or ASTs was observed at the subject property or identified in regulatory agency records.

### **5.3 Back-Up Generators**

No emergency generators were observed at the subject property.

### **5.4 Elevators**

No elevators are present at the subject property.

### **5.5 Hydraulic Trash Compactors**

No trash compactors were observed onsite.

### **5.6 Indications of Polychlorinated Biphenyls (PCBs)**

No transformers were observed on the subject property.

### **5.7 Other Conditions**

#### **5.7.1 Asbestos**

Because there are no structures on the subject property, asbestos-containing materials are not considered an environmental concern at the subject property.

- U.S. Engineering Control Sites - within ½ mile of the subject property;
- U.S. Institutional Control Sites – within ½ mile of the subject property;
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land – within ½ mile of the subject property;
- SWRCB – UST – within ½ mile of the Site;
- DTSC – Voluntary Cleanup Program (VCP) – within ½ mile of the site;
- SWRCB – Voluntary Cleanup Sites (VCP) – within ½ mile of the site; and
- SWRCB – Solid Waste Facilities (SWF/LF) – within ½ mile of the subject property.

In addition, local, State and Federal supplemental regulatory databases were searched (e.g., AST, Coal Gasification Plants, and Waste Discharge System databases) and summarized in the EDR report. The findings of the review of the EDR report are presented below.

#### **4.2.1 Subject Property Records**

The subject property was not listed on any of the regulatory agency databases searched.

#### **4.2.2 Surrounding Area**

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases. The site closest to the subject property or most likely to have the potential to pose an environmental concern to the subject property is discussed below.

**Ohlone Community College District**, Mowry Avenue/Cherry Street, is an 81-acre site located immediately west of the subject property across the ACFCWCD drainage channel. The site is listed on DTSC's Voluntary Cleanup Sites (VCP) database. The site had been in agricultural use since 1939, but is the future site of Ohlone College. During a groundwater investigation performed at the site in 1989, three wells were installed and analyzed for the presence of VOCs. Perchloroethene (PCE), trichloroethene (TCE) and 1,2-dichloroethene (1,2-DCE) were detected in one well at concentrations of 33, 11 and 15  $\mu\text{g/L}$ , respectively (T&R, 2003). The well was located across the ACFCWCD drainage channel from the northwest corner of the subject property. A total of 10 wells were subsequently installed at the site, which were destroyed in 1999 and 2003. No VOCs were detected in the wells in subsequent samplings.

During a 2003 cone penetrometer study performed at the site, no TPHg, TPH as motor oil (TPHmo), cyanide, PCBs, or chlorinated pesticides were detected in groundwater. TPHd was detected in three groundwater sampling locations as high as 290  $\mu\text{g/L}$  (T&R, 2005a). The

### **5.7.2 Radon**

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from 49 sites within Alameda County. The average value for radon level reported in this region was 0.776 pico curies per liter (pCi/l) of air for the first floor living area. This is lower than the U.S. EPA's recommended action level of 4 pCi/l.

The survey indicates that it is unlikely that radon levels in buildings in Alameda County are above the EPA action level; no radon gas testing is deemed necessary for the subject property.

### **5.7.3 Solid Waste**

No solid wastes are currently generated at the subject property.

### **5.7.4 Lead in Paint**

The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. The use of paint containing greater than 0.06 percent lead was also prohibited in areas where consumers have direct access to painted surfaces. Because there are no residential structures on the subject property, lead-based paint is not an environmental concern at the subject property.

## **6.0 FINDINGS**

The subject property is a vacant lot of approximately 79.8 acres. The site is bounded to the north by Cherry Street, to the east by Stevenson Boulevard, to the south by a drainage canal and to the west by ACFCWCD drainage channel. The site is located in a mixed residential, agricultural, and commercial area within the City of Newark.

PES's historical research indicates portions of the subject property have been used agriculturally from at least the 1950s. A dairy was reportedly present on the site in the 1950s and 1960s, and horse stables in the 1970s.

An ESA and limited Phase II investigation performed in 1997 on the subject and adjacent property to the south reported the presence of low levels of a petroleum hydrocarbon resembling motor oil from a depth of 5 feet in soil and groundwater. Based on the site use and the lack of detail provided in the CET report related to the sample collection and analytical methodologies, in PES' opinion the reported presence of TPHmo is questionable. It is possible that the reported TPHmo may be due to naturally occurring hydrocarbons in the subsurface. In any event, the reported low concentrations do not represent a significant environmental concern at the site.

No TPHg, TPHd, BTEX, MTBE, VOCs, organochlorine pesticides or organophosphorus pesticides were detected by CET in soil or groundwater samples. However, the soil samples were collected by CET from approximately 5 feet bgs, which is deeper than pesticide residues are usually encountered.

Two partially-full 1-gallon containers of herbicide were observed on the subject property. No other evidence of chemical storage or concerns were noted on the site.

Based on a review of environmental regulatory databases and regulatory agency records, PES did not identify any offsite sources of environmental concern to the subject property. However, pesticides, specifically toxaphene and DDE, were detected in soil above published residential soil screening levels on the property adjacent to the subject property to the west.

PES performed a *Phase I Environmental Site Assessment* of the subject property in conformance with the scope and limitations of ATSM Practice E. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment revealed no recognized environmental conditions (RECs) in connection with the property.

The following noteworthy observations were made that may present an environmental concern at the site:

- The site has been in agricultural use from at least the 1950s. No information is available concerning historical pesticide and/or herbicide use at the site. However, the pesticides DDE and toxaphene were identified in soil on the adjacent property at levels above published residential soil screening levels. Based on our review of aerial photographs, the subject and adjacent property appear to have a similar agricultural history;
- The presence of a small quantity of herbicide containers (two, 1-gallon) observed on the subject property suggest recent herbicide use. The herbicide observed on the property contains oxyflurofen, naphthalene and isophorone;
- Construction debris was reportedly observed at the site sometime prior to 1980; and
- The potential exists for the presence of septic tanks or USTs associated with the former structures on the site along Cherry Street in the north central portion of the site.

## 7.0 DATA GAPS

No information was available concerning historical chemical use and the subject property. No other data gaps that may have affected our ability to identify RECs associated with the subject property were identified during the performance of this Phase I ESA.

## 8.0 ADDITIONAL SERVICES

PES recommends that a Phase II investigation be performed at the site to evaluate the potential affects of historical site activities. The Phase II should include the following:

- Sampling and analysis of near surface soils to evaluate the presence of residual agricultural chemicals;
- A geophysical survey to screen the former ranch compound area for USTs; and
- Excavating test pits across the site to observe soil conditions and assess whether there is evidence of construction debris or other deleterious fill material.

## 9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

Resumes of the Environmental Professionals signing this report are presented in Appendix D.

# EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR Historical Topographic Map Report includes a search of available public and private color historical topographic map collections. For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topographic maps covering the United States.

## References

To meet the prior use requirements of ASTM E 1527-05, Section 8.3.2, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-05, Section 8.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. ASTM E 1527-05 requires *"All obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary and both reasonably ascertainable and likely to be useful."* (ASTM E 1527-05, Section 8.3.2) *Reasonably ascertainable means information that is publicly available, obtainable from a source within reasonable time and cost constraints, and practically reviewable.*

EPA's Standards and Practices for All Appropriate Inquiries (AAI), Section § 312.24, identifies the historical sources of information necessary to achieve the objectives and performance factors of § 312.20. According to AAI, *"historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."*

## Data Gaps

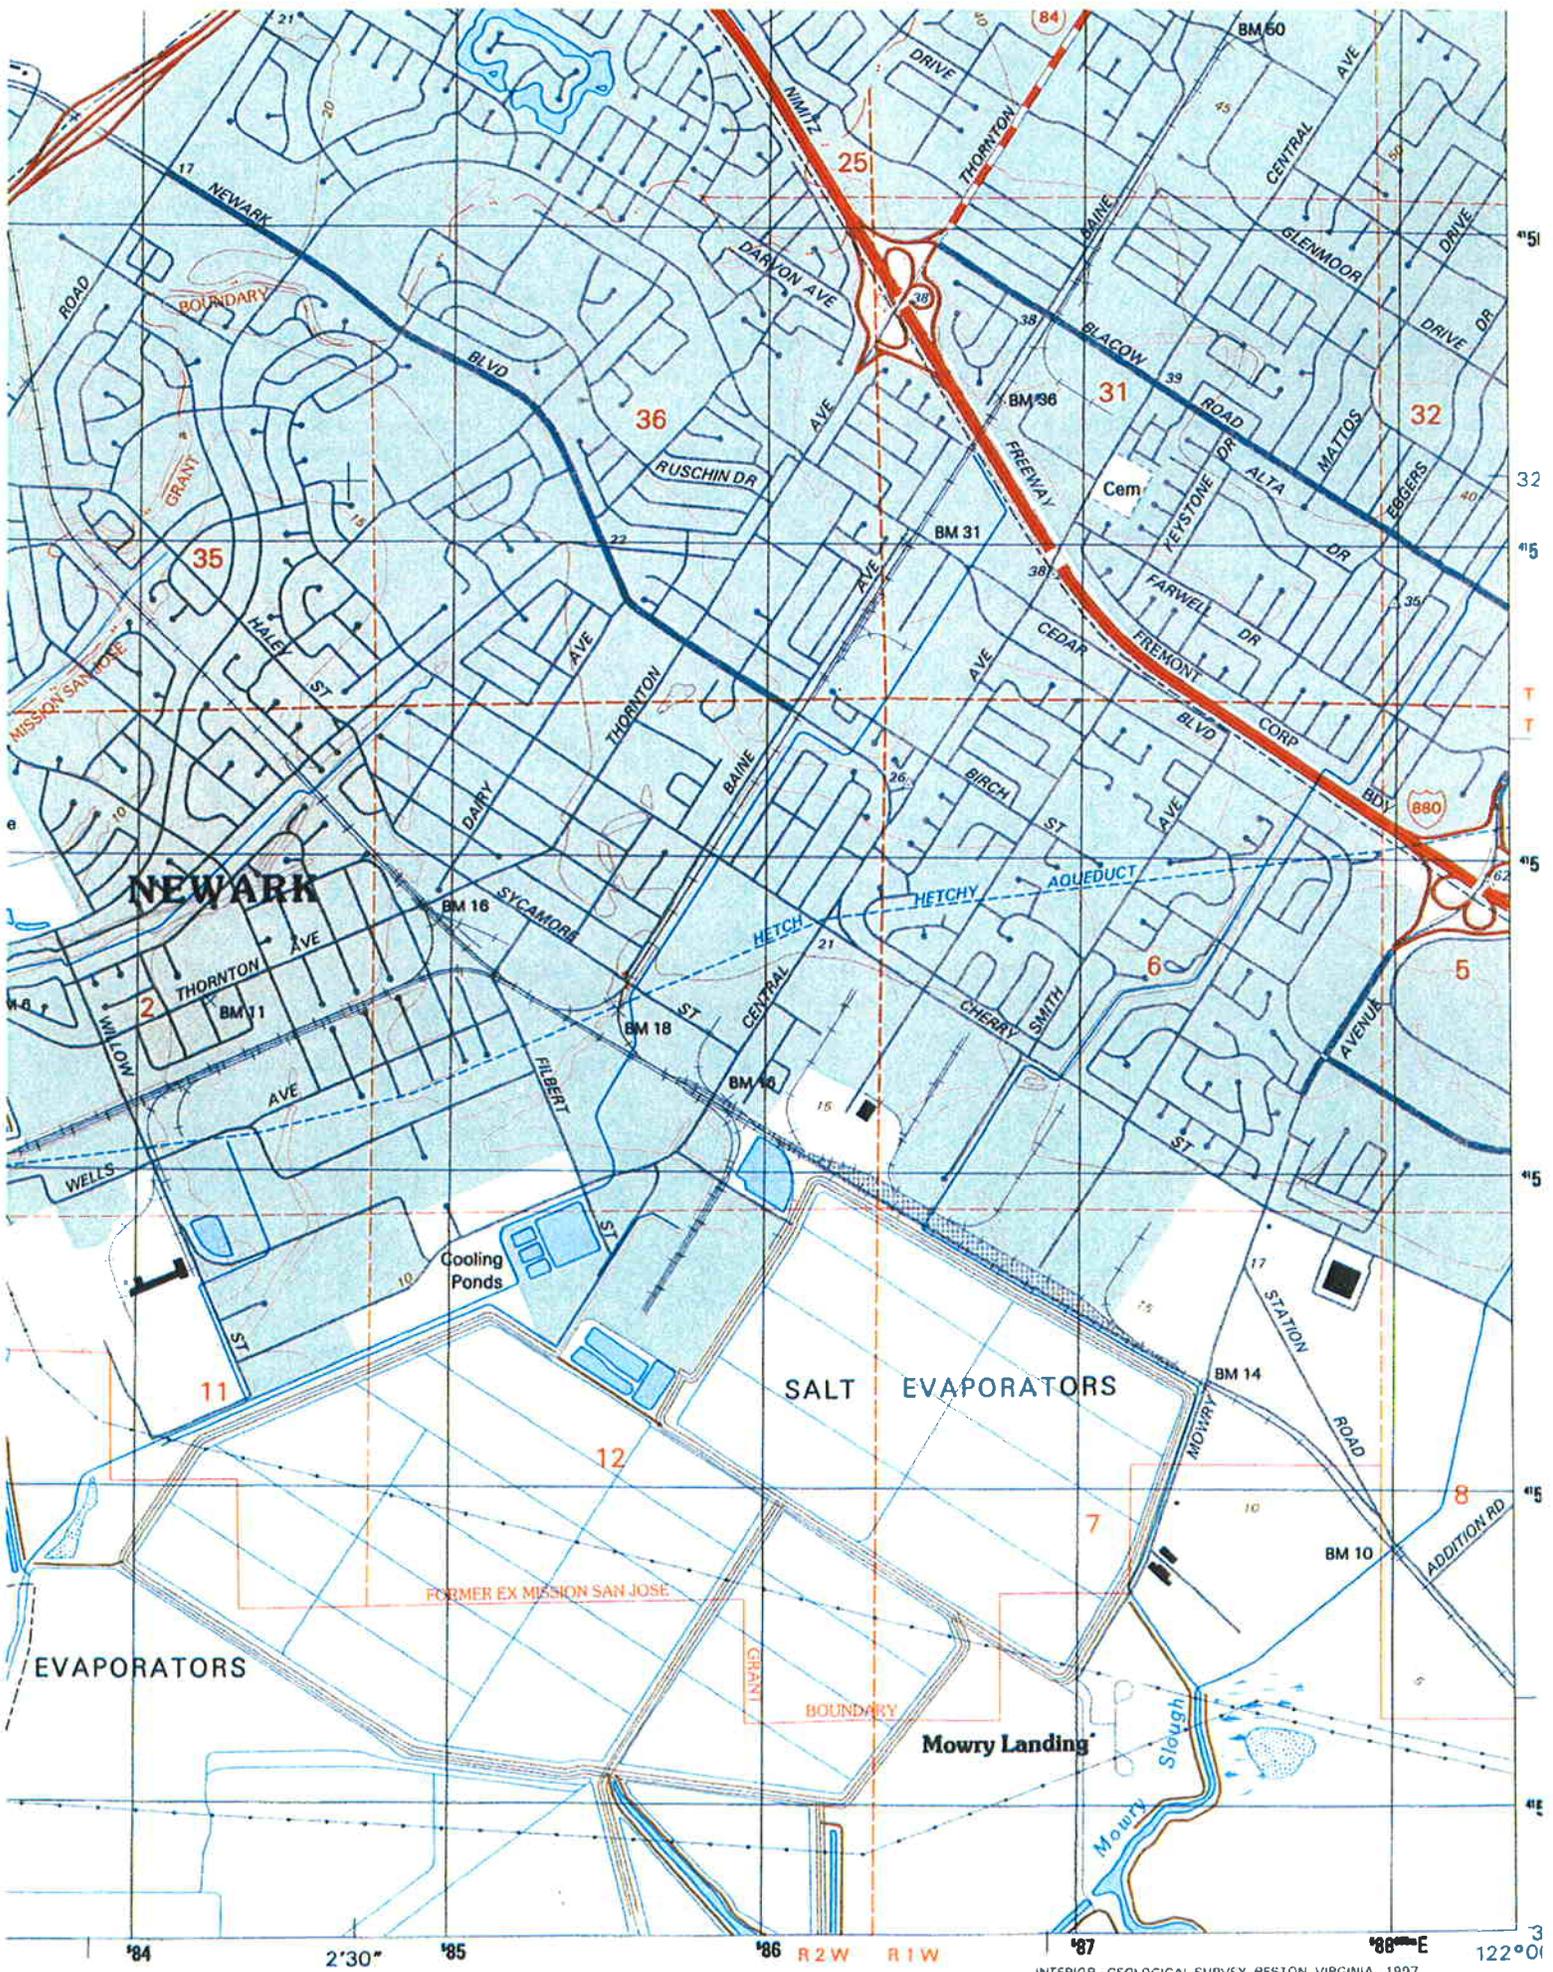

In order to address data gaps, additional sources of information may be consulted. According to the AAI, Section § 312.20 (g), *"to the extent there are data gaps (as defined in § 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps."* According to ASTM E 1527-05, Section 8.3.2.3, *"historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met....If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for their exclusion."*

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### FEDERAL RECORDS

**CERCLIS-NFRAP:** Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/24/2005 has revealed that there are 6 CERC-NFRAP sites within approximately 1 mile of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/21/2006 has revealed that there are 2 RCRA-TSDF sites within approximately 1 mile of the target property.

**HAZNET:** The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2003 has revealed that there are 31 HAZNET sites within approximately 0.5 miles of the target property.

Threat to Water Quality: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Prime Waste: Process Waste (Waste produced as part of the industrial/manufacturing process) - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

2nd Waste Type: Solid Wastes - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

 PERMIT: NPDES 402 - 0027812  
 SAMPLE RESULTS INSPECTION RESULT NO PROBLEM.  
 INSPECTION(STATE) SITE INSPECTION & INTERVIEW  
 INSPECTION(OTHER) E&E REP C(84)C403 ON SI. NO RECOM MADE  
 IN REP. 2 SPILL AREAS TESTED. RESULTS -  
 ELAVATED HEAVY METALS. AREAS HAVE BEEN  
 EXCAVATED, CON ACCEPTABLE.  
 Region 2 staff received Groundwater Technology/Character-  
 ization and Feasibility Study for this site. The submittal  
 outlined proposed remedial work on groundwater solvent  
 plumes required under a RWQCB order.  
 Not reported  
 There are three major areas of soil and groundwater  
 contamination: 1) a clorinated organics plume near the  
 center of the facility; 2) a methanol plume near the  
 southern portion of the site; and 3) a diesel plume  
 which overlaps the methanol plume. The plumes are not  
 flowing off-site. A groundwater extraction and  
 treatment system is being planned. Extraction by a  
 network of shallow wells will be followed by a  
 fixed-film bioreactor treating 60 lbs/day organics.  
 Waste discharge requirements of 1 ppm of VOCs will  
 be met. Ketones have been diminished but acetone and  
 MEK are still present at 100 mg/l and PCBs at 12 mg/l.  
 Not reported  
 Due to the presence of contamination, DTSC will delete  
 this site from the list of Certified Sites and show the  
 site as referred to the RWQCB.

Background Info : The Peterbilt Motors Site (Peterbilt/Site) operated a truck  
 Background Info : manufacturing facility from 1962 until October 1986. The Site's  
 Background Info : use prior to 1962 is unknown. The hazardous substances used and  
 Background Info : stored at the Site were: diesel fuel, gasoline, organic solvents,  
 Background Info : paints, and other organic chemicals. They were stored and/or  
 Background Info : treated in several areas of the facility: an underground storage  
 Background Info : tank (UST) area, an aboveground tank farm, four drum storage  
 Background Info : areas, a wastewater treatment plant including aboveground tanks,  
 Background Info : and a surface impoundment/waste evaporation pond area.  
 Background Info : Underground pipelines were used to transfer the hazardous  
 Background Info : substances between some of these areas. The manufacturing and  
 Background Info : waste management areas of the facility were closed by Peterbilt  
 Background Info : during the 1980s and early 1990s. The Site was used for office  
 Background Info : space, storage, warehousing, and as an engineering prototype test  
 Background Info : facility from 1986 to 1993. In 1994, property management and  
 Background Info : remediation responsibilities were transferred to Peterbuilt's  
 Background Info : parent company, PACCAR. PACCAR used the Site from 1993 to 1995  
 Background Info : primarily for warehousing and shipping. The Site was sold to  
 Background Info : Georgia-Pacific Corporation (GP) on December 11, 1995. GP  
 Background Info : currently uses the Site as a rail-to-truck wood products  
 Background Info : distribution facility.  
 Background Info : Not reported  
 Background Info : Site investigations were conducted at the Site between 1983 to  
 Background Info : 1995 and addressed six areas of potential concern: 1) the  
 Background Info : underground storage tank (UST) area, 2) the pipeline/utility  
 Background Info : conduit area, 3) the aboveground tankfarm/wastewater treatment  
 Background Info : plant area, 4) the hydraulic lift pit area, 5) the oil spill  
 Background Info : area, 6) the surface impoundment/waste evaporation ponds area.  
 Background Info : The six areas were individually remediated under the oversight  
 Background Info : of various state and local agencies, including Newark Fire  
 Background Info : Department, San Francisco Regional Water Quality Control Board,  
 Background Info : the Department of Health Services (DHS -precursor to the

Comments : Records Search: RWQCB -- filed under Sobex.  
State Inspection: RWQCB sampled stormwater.  
Sample Results: 32 ppb PCBs.  
Department of Toxic Substances Control received Field  
Investigative Team report- Epa recommends higher  
priority for further site assessment 1-27-92.  
Preliminary assessment Done: Facility is part of a shop-  
ping complex, Sobex Warehouse still present. Though not  
active, facility may reactivate at anytime.  
Submitted to EPA: EPA recommends SI High based on his-  
torical use of PCB and large quantities of hazardous  
materials stored on site.

 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 Agency Type: Private  
 Waste Type: Not reported  
 Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.  
 Reclamation: Not reported

 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 Agency Type: Private  
 Waste Type: Not reported  
 Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Completed PEA. Sampling in 1990 detected elevated levels of DDT, DDE and DDD ranging from 4.7 to 12.9 ppm. Approximately 81 cubic yards of soil contaminated with high levels of DDT were disposed off-site. Post-remediation sampling showed residual levels of total DDT below established residential levels.  
 Completed Site Screening.

 Background Info : A Preliminary Endangerment Assessment was completed in December 2003, and found that pesticides have been detected in shallow soil at the site and volatile organic compounds were detected in one monitoring well on the up-gradient edge of the site. In August 2003, DTSC entered into a Voluntary Cleanup Agreement with the Ohlone Community College District, the current owners of the site, to oversee the development and implementation of a cleanup plan for the site (aka: Ohlone Community College Newark Center Site see site ID 01010013). A Phase I and Phase II Environmental Site Assessment was submitted in June 2003, but further work is delayed pending completion of the District's Master Plan.

 Groundwater and soil samples taken.  
 GW 1,2 DCE 19 ppb; PCE 27 ppb; TCE 10 ppb; diethyl  
 phthalate 250 ppb. PCE & TCE > drinking water stan-  
 dards. Soil DDE 2200 ppb; DDT 880 ppb; toxaphene &  
 endrin < /= 2.5 ppm.  
 Composite soil samples not adequate for site char. more  
 extensive sampling necessary.  
 Site Screening:  
 The site is currently a vacant lot - the property was used  
 for agriculture since at least 1969. A 1989 environmental  
 investigation revealed pesticide contamination  
 in shallow soil and volatile and semi-volatile organic compounds  
 were detected in site groundwater during a recent groundwater  
 sampling. Volatile and semi-volatile organic compounds were not  
 found in the site's soil. Groundwater contamination has not been  
 linked to the site's past agricultural activities.

 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 Agency Type: Private  
 Waste Type: Not reported  
 Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

## EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
D007	CHROMIUM
D009	MERCURY
D011	SILVER
D035	METHYL ETHYL KETONE
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
P030	CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
P098	POTASSIUM CYANIDE

## EPA Waste Codes Addendum

Code	Description
P098	POTASSIUM CYANIDE K(CN)
P099	ARGENTATE(1-), BIS(CYANO-C)-, POTASSIUM
P099	POTASSIUM SILVER CYANIDE

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### **NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **NPL RECOVERY:** Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### **CERCLIS:** Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Number of Days to Update: 40	Next Scheduled EDR Contact: 06/19/2006
	Data Release Frequency: Quarterly

### **CERCLIS-NFRAP:** CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### **RCRA:** Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### **US INST CONTROL:** Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

### **US BROWNFIELDS:** A Listing of Brownfields Sites

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

### **UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### **RAATS:** RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### **DEED:** Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## **HAZNET:** Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### EDR PROPRIETARY RECORDS

**Manufactured Gas Plants:** EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

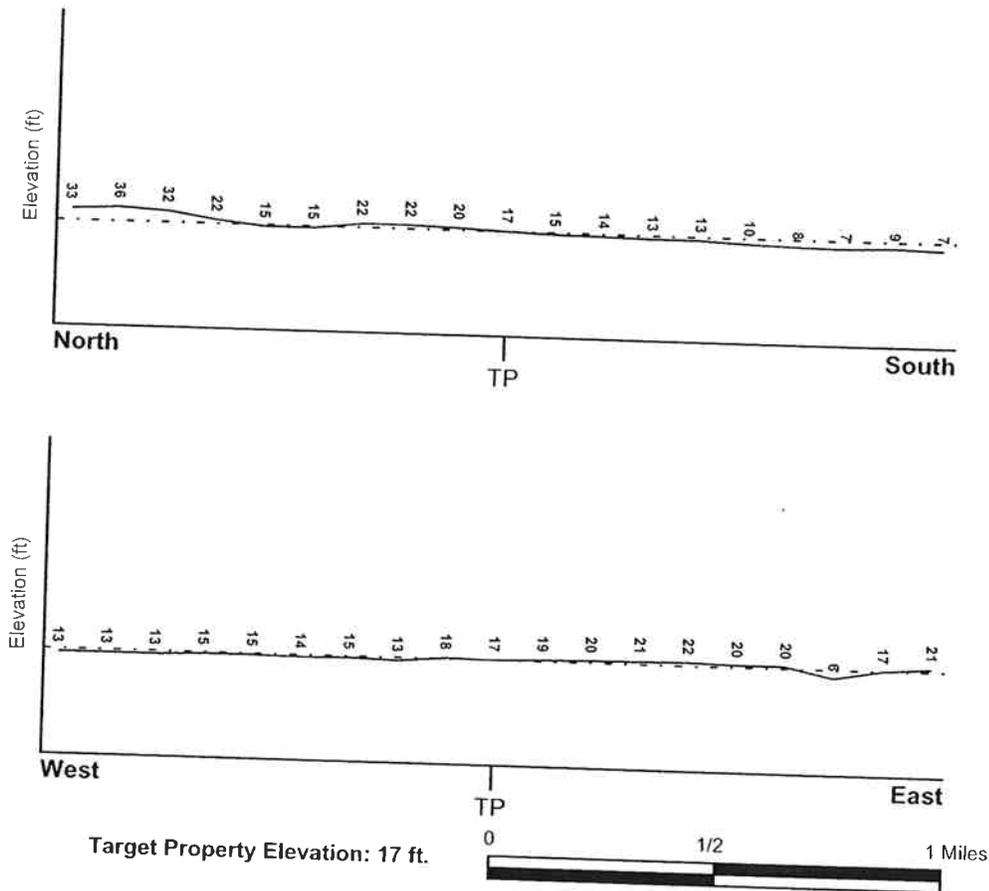

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: OMNI

Soil Surface Texture: silty clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly. Soils may have a saturated zone, a layer of low hydraulic conductivity, or seepage. Depth to water table is less than 1 foot.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 2

Soil Component Name: MARVIN

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly. Soils commonly have a layer with low hydraulic conductivity, wet state high in profile, etc. Depth to water table is 1 to 3 feet.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 0 inches

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

**PWS ENF:** Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

**USGS Water Wells:** USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## STATE RECORDS

**California Drinking Water Quality Database**

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

**APPENDIX D**

**RESUMES OF ENVIRONMENTAL PROFESSIONALS**

**JULIE TURNROSS**

**Senior Hydrogeologist**

Ms. Turnross has over 25 years experience serving in technical and management capacities on a variety of projects in the areas of groundwater hydrogeology and geophysics. Her projects have included Phase I environmental site assessments, remedial investigations, feasibility studies, risk characterizations, and implementation of remedial alternatives at RCRA, CERCLA, and other facilities with soil, groundwater, surface water, and air contamination. Contaminants of concern have included organic solvents, petroleum hydrocarbons, metals, and explosives.

Ms. Turnross has provided litigation support and peer review for a wide variety of cases, and has served as an expert witness. She has also worked extensively with regulatory agencies throughout California and the west coast.

**EDUCATION**

University of California, Berkeley: M.S., Engineering Geoscience, 1984

University of Arizona, Tucson: B.S., Geoscience, 1982

**EXPERIENCE**

2005 – present	PES Environmental, Inc., Novato, California
1995 - present	JTEC Environmental, Sebastopol, California
1991 - 1995	Treadwell and Rollo, San Francisco, California
1984 - 1991	Harding Lawson Associates, Novato, California
1982 - 1984	U.S. Geological Survey, Denver, Colorado & Berkeley, California
1983	Laurence Berkeley Laboratory, Berkeley, California
1981	ARCO Exploration Company, Lafayette, Louisiana

**REGISTRATION**

California Registered Environmental Assessor No. 7862

**REPRESENTATIVE PROJECTS**

**Naval Air Station:** Performed review of remedial investigation, risk characterization, remedial alternative selection, remediation, and remediation verification for a Naval facility. Contaminants of concern included ordnance, solvents, metals, and petroleum hydrocarbons.

**Julie Turnross**

**Page 2 of 3**

**Litigation Support:** Provided peer review of soil and groundwater investigation and remediation in support of lawsuit resulting from incomplete site cleanup. Analyzed investigation design and procedures, remedial alternative evaluation, cleanup methods, and confirmation testing.

**Phase I Environmental Site Assessments:** Performed or reviewed over 250 Phase I Environmental Site Assessments using ASTM standards. Clients have included lending institutions, real estate developers, insurance companies, law firms, and property owners. Properties assessed have included manufacturing facilities, office buildings, industrial sites, residential properties, and shopping centers.

**Navy Shipyard:** Provided technical review of Navy investigation and remedial activities and support for developer of former Navy shipyard. Site contaminants included metals, solvents, PCBs, and radiological material. Remediation included innovative technologies and implementation of land use controls.

**Explosives Manufacturing Facility:** Project manager for demolition of former explosives manufacturing facility, soil and groundwater investigation, and preparation of remedial investigation report. Project included development of facility use history, preparation of bid specifications, and coordination and documentation of demolition, and hazardous waste identification and disposal process.

**Semiconductor Facility:** Project manager for remedial investigation and feasibility study at CERCLA facility in Mountain View, California. Investigations included soil gas surveys, geophysical surveys, and soil, groundwater, and air sampling. Soil vapor extraction and groundwater extraction and treatment were used as interim remedial measures. Monitored effectiveness of 100-foot-deep, 3400-foot-perimeter slurry wall to be used to isolate contaminant source to allow dewatering and subsequent remediation by soil vapor extraction.

**Chemical Facility:** Project manager for remedial field investigation and corrective measures study for highly contaminated RCRA facility in Oregon. Contamination included presence of numerous free-phase and dissolved chemicals. Investigation included soil gas survey, soil borings, monitoring well installations, and air monitoring. Part of the investigation was conducted in Level B protection.

**Geothermal Investigation:** Performed integrated analysis of geophysical, hydrogeologic, and geologic data to develop conceptual model for geothermal basin. Designed geophysical field program using prototype equipment to evaluate geothermal reserve.

**Water Supply Study:** Provided water supply evaluation for proposed 300-family development with golf course and conference facility. Project included investigation of groundwater

resources and water quality, and aquifer testing.

**Oil Refinery:** Served as technical advisor for remedial investigation and cleanup at oil refinery in southern California. Tasks included aquifer testing, investigating potential of supplying water supply well, estimating effects of saltwater intrusion on contaminant movement, and designing groundwater extraction system.

**Groundwater Flow Modeling:** Used three-dimensional finite-difference groundwater flow model to optimize groundwater extraction well locations and to evaluate extraction system efficiency at electronics facility in Santa Clara, California. The site was comprised of multiple discontinuous aquifers with considerable variances in thickness and hydraulic conductivity.

**WILLIAM F. FRIZZELL**

**President  
Principal Engineer**

Mr. Frizzell is a civil/environmental engineer with 22 years of experience, specializing in environmental assessments of properties, soil and groundwater investigations and remediation, and hazardous and solid waste management. He has been the project manager responsible for all phases of Remedial Investigations/Feasibility Studies and remedial action planning and design. He has evaluated hazardous waste disposal facilities throughout the U.S., focusing on facilities' compliance with Federal and State regulations, and hydrogeological characteristics of the disposal sites. For real estate transfer projects, Mr. Frizzell has performed and/or managed more than 200 environmental assessments for developers, lenders, and attorneys. He has worked closely with developers on residential and commercial projects, which require environmental cleanup strategies and remediation of soils and/or groundwater. He also provides third party review of environmental projects for preparation of Environmental Impact Reports and litigation support. Mr. Frizzell has developed plans and specifications for hazardous waste site closures and has been involved in the design of gas, leachate, and surface water control systems. In addition, he has designed and prepared plans and specifications for slurry walls to control the migration of contaminated groundwater, and have been responsible for the selection and installation of synthetic liners for hazardous waste applications.

Mr. Frizzell's project experience also includes dredging feasibility studies for open water and land disposal sites. These projects have included characterization of sediments in contaminated and uncontaminated environments, biological and water quality assessments, monitoring programs and maintenance of disposal areas.

Mr. Frizzell has also performed site investigations for foundation studies and has experience in design and construction of projects involving structural grouting, dam construction, and earthwork.

**EDUCATION**

B.S., Civil Engineering, University of California, Berkeley, 1978

Postgraduate education has included courses and seminars in Storm Water Management, Geotechnical Engineering of Waste Management Systems, Groundwater Hydrology, Hazardous Materials Management and Handling, Stabilization and Solidification of Hazardous Waste, and Management Training.

**William F. Frizzell**

## **REGISTRATION**

Civil Engineer - California, Arizona, Washington

Environmental Assessor - California, Washington

## **REPRESENTATIVE PROJECTS**

**Storm Water Management** – Program manager for assisting various clients in compliance with the State of California Industrial Activities Storm Water General Permit. Activities included preparation of storm water pollution prevention plans, storm water monitoring plans and annual reports.

**Litigation Support/Expert Witness Projects** - Litigation support and expert witness services have included the areas of soil and groundwater remediation cost recovery actions; standard of care evaluations for environmental site assessments; assessment of damages due to releases from underground storage tanks; and claims due to a residential development over contaminated soils and groundwater. Client: Various Law Firms

**Real Estate Assessment Projects** - Program and project manager responsible for all phases of numerous real estate transfer assessment projects. Projects involve evaluating properties for potential liability due to hazardous waste contamination, site history evaluations, site inspections, regulatory review, and preparation of assessment reports. Program responsibilities include marketing, business development, training, and quality assurance/

quality control program development. Clients: Various Lending Institutions, Insurance Companies, Attorneys, Finance Companies and Developers

**Dredging Feasibility Studies, Port of Oakland, California** - Project manager responsible for dredged sediment disposal project involving site characterization and geochemical and surface water modeling to predict effluent water quality. Project involved conducting a feasibility study to dispose highly saline and contaminated sediments in an upland environment and development of control measures. Client: Port of Oakland

**Richmond Marsh Restoration, Richmond, California** - Large amounts of paint residue were uncovered during construction of new channels to restore marshland on edge of San Francisco Bay. As project manager: developed and implemented site-characterization plans; developed, tested, and analyzed potential remedial actions; selected preferred remedial action; prepared draft and final Remedial Action Plans; attended public hearings; developed community Relations Plan; and developed construction plans and specifications and post-construction monitoring plans. Managed all negotiations with state regulatory agencies. Client: City of Richmond

**Hazardous-Waste Investigation, State Superfund Site, Richmond, California** - Project manager for investigation at former pesticide formulating and packaging site. Responsible for all phases of investigation, including hydrogeological studies, analytical testing program, contaminant transport evaluations, study of offshore contaminant migration in marine sediments, evaluation of bioavailability of contaminants to marine organisms, and dredging of contaminated sediments. Planned and implemented remedial actions involving construction of temporary waste piles, installing synthetic membranes, and removing and transporting contaminated soils and debris. Project has included close coordination and involvement with various state regulatory agencies. Client: Levin Richmond Terminal Corporation

**PCB Spill Investigation and Cleanup, Northern California State Superfund Site** - Engineer for study to determine extent of contamination from PCB spill. Organized hydrogeologic study to determine contaminant migration potential, examined cleanup options, and prepared economic analysis of alternatives. Client: MGM Brakes

**Landfill Closure Plans and Specifications, Alameda, California** - Project manager responsible for preparing plans and specifications for closing 43-acre sanitary landfill adjacent to San Francisco Bay. Project included construction of surface impoundments for placing dredge spoils for use as cover material and preparation of earthwork plans and specifications for cover system. Project also included designing and installing post-closure groundwater monitoring system and performing leachate characterization study and contingency plan. Client: City of Alameda

**Soil Process and Treatment Program, Richmond, California** - Project manager for site remediation involving processing and treatment of 35,000 cubic yards of lead-contaminated

**William F. Frizzell**

**Page 4 of 6**

soil. Processing involved physical separation through screening; treatment involved proprietary fixation process. Responsible for regulatory negotiations, contractor selection, and quality control program. Client: City of Richmond

**Site Remediation Program, Pittsburg, California** - Project engineer responsible for plans and specifications to remediate 4-acre asbestos-contaminated site. Project involved examination and evaluation of cover options, selection of contractors, regulatory negotiations, and construction observation. Client: John Mansville

**Slurry-Wall Design, Martinez, California** - Project engineer responsible for designing 3300-foot-long slurry wall through existing surface impoundments containing effluent from oil refinery. Responsible for setting up and evaluating effluent/bentonite slurry permeability testing program for development of design criteria. Duties also included preparing plans and specifications, evaluating contractors' bids, and reviewing construction-control program for slurry-wall installation. Client: Shell Oil

**Surveys of Hazardous-Waste Treatment, Storage, and Disposal Sites, Nationwide** - Project manager responsible for conducting surveys and preparing evaluation reports for over 50 commercial hazardous-waste facilities. Evaluations focus on hydrogeologic, managerial, environmental, regulatory, financial, and safety aspects of disposal-site operations. Projects have been performed in response to generator concern for "cradle to grave" responsibility for hazardous waste. Clients: Shell Oil Company, Chevron U.S.A. Inc., and IBM Corporation

**Landfill Assessment and Geotechnical Studies, Albany and Berkeley, California** - Project manager for investigating and evaluating inactive sanitary landfills in regard to generation and migration of leachate and methane, providing recommendations for developing landfills to support various structures, assessing potential impact of landfill on future development, and preparing preliminary closure plans. Project has also included preliminary geotechnical studies for landfills involving geohazards evaluation, general foundation recommendations, and slope-stability studies. Client: Hall, Goodhue, Haisley and Barker, for Santa Fe Land Improvement Company

**Closure Plan Development, Tucson, Arizona** - Project engineer for closure plan for 18 sludge-drying beds from wastewater treatment plant. Project included developing analytical testing program, decontamination procedures, and plans for closing system. Client: Hughes Aircraft Company

**Hazardous-Waste Investigation, State Superfund Site, Richmond, California** - Project manager for site investigation and remedial-action planning at site contaminated with heavy metals from uncontrolled releases from waste piles and buried drums. Duties included setting up field investigations and analytical programs for site characterization and planning remedial actions. Client: Summer del Caribe

**RCRA Part B Permit Application Review, Hazardous-Waste Facility** - Responsible for reviewing Part B permit applications for various treatment, storage, and disposal facilities.

**William F. Frizzell**

**Page 5 of 6**

Reviews focus on operators' compliance with federal regulations. Client: A. T. Kearney, for U.S. Environmental Protection Agency

**Hydrogeological and Geotechnical Investigation of Dioxin Contamination, Times Beach, Missouri** - Served as alternate field operations manager. Conducted drilling and sampling and implemented decontamination and chain-of-custody procedures. Client: CH2M Hill, for U.S. EPA

**Environmental Risk Assessment, Santa Rosa, California** - Developed risk assessment report focusing on environmental risks associated with City of Santa Rosa operations, including sewer treatment plants, sludge disposal, and hazardous-material storage. Client: Environmental Risk Assessors, U.S.A.

**Hazardous Waste Investigation, Sacramento, California** - Engineer and assistant project manager for site investigation to characterize unknown wastes and to determine lateral and vertical extent of contamination due to unmanaged-disposal practices. Client: Aerojet

**Hazardous Waste Investigation, Santa Rosa, California** - Engineer for site investigation to determine existence and direction of migration of organic solvents from point sources of pollution. Organized analytical testing program to determine amounts and extent of groundwater pollution. Client: Hewlett-Packard

**Landfill Closure, Alameda, California** - Project engineer responsible for preparing all phases of plans and specifications for combination sanitary landfill closure and dredge spoils pond construction on 110-acre site. Project involved design of landfill closure system, slurry wall for leachate control, passive methane gas venting system, dike construction, seawall repair, decant structure, and hydraulic control systems. Client: U.S. Navy

**Hazardous Waste Investigation, Martinez, California** - Field engineer during investigation to determine extent of contamination due to leaching from disposal pond containing tetra ethyl lead. Supervised drilling activities and safety procedures for initial phase of cleanup study. Client: E.I. DuPont Nemours

**Gasoline Spill Investigation, Novato, California** - Project engineer during investigation conducted to determine extent of groundwater and soil contamination resulting from leaking underground gasoline storage tanks. Project involved using soil-gas and groundwater monitoring techniques. Client: Texaco Incorporated

**Gasoline Spill Investigation, Stockton, California** - Conducted post-remedial-action investigation to assess potential for future migration of gasoline from service station with residual soil contamination. Client: Exxon Company U.S.A.

**Tailings Dam, Green River, Wyoming** - Resident engineer during construction of tailings dam for solid-waste management program. Responsible for quality control, redesigned plans to accommodate field conditions, and prepared final earthwork report. Client: Allied Chemical

**William F. Frizzell**

**Page 6 of 6**

**Hillside Development, Walnut Creek, California** - Resident engineer in charge of construction for many phases of earthwork. Supervised mass grading operations including landslide repair, installation of subsurface drainage, and rebuilding of cut slopes. Installed and monitored hydraugers and piezometers for groundwater control. Client: Terra California

**Gravel Island, Beaufort Sea, Alaska** - Design verification agent during construction of island for drilling platform. Reviewed design criteria and observed construction in arctic environment. Client: Exxon Company, U.S.A.

**Foundation Construction, Oakland, California** - Field engineer during construction of drilled-pier foundations. Client: Peralta Hospital

**Structural Grouting, Port Clinton, Ohio** - Field engineer for stabilization of power plant foundation. Designed grout mixes according to varying subsurface conditions, supervised grouting batch plant operation, and installed extensometers to measure rock displacement during construction. Client: Toledo Edison Company

**Earthquake Engineering, San Francisco, California** - Developed seismic-response spectra for several sites in California using various computer programs and data-retrieval systems. Client: Nuclear Regulatory Commission
